

Card Game Rules Sheets for Single Deck Tuck Boxes

For pricing, each “page” is still a full 8.5” x 11” section. So a “page” gives you 3 strips/sections. But to get the pricing, we must print pages double up onto 11” x 17” sheets, as this diagram shows.

Card Game Rules Sheets for Double Deck Tuck Boxes

Layout onto an 11” x 17” sheet.
Divide that sheet in half, giving you two 8.5” x 11” sections.
Each of these halves gets further divided into three sections, each 3.5” tall by 8.5” wide.

You can include any number of strips into a box that will fit in addition to your cards. Or if your rules fit onto a single strip, a single 11” x 17” sheet printed (2 pages for pricing) would yield rules for 6 games.

You need no special layouts if your product will use a double deck tuck box. Our double deck boxes are large enough so that a 8.5” x 11” sheet fits neatly into the box when folded twice (quarter folded).

Each 3.5” tall by 8.5” wide section is cut out after printing. That leaves you with a .5” by 17” strip that gets trimmed off and thrown away.
Each 3.5” by 8.5” strip can then be folded twice to fit neatly into a single deck tuck box.

All of the lines on this diagram are here purely to illustrate the layout concept. You need not include any lines in your page layouts.

Though you should still lay them out so there are two pages up onto an 11” x 17” sheet.

Inside each 3.5” x 8.5” strip is a blue box. This represents a .25” border margin inside each strip.
The dotted lines show where the “folds” would be when folding each strip twice for packaging.
